Commonly Used Pesticide Turns Honey Bees Into 'Picky Eaters'

May 23, 2012

Biologists at the University of California, San Diego, have discovered that a small dose of a commonly used crop pesticide turns honey bees into "picky eaters" and affects their ability to recruit their nestmates to otherwise good sources of food. [Full Story](#)

Source

University of California, San Diego

The National Science Foundation (NSF) is an independent federal agency that supports fundamental research and education across all fields of science and engineering. In fiscal year (FY) 2012, its budget is \$7.0 billion. NSF funds reach all 50 states through grants to nearly 2,000 colleges, universities and other institutions. Each year, NSF receives over 50,000 competitive requests for funding, and makes about 11,000 new funding awards. NSF also awards nearly \$420 million in professional and service contracts yearly.
